

LEO West (x=1, y=4) · Four-channel floating-mean GLS amplitudes

PRELIMINARY — QC AND TIME BASE UNRESOLVED

2025-04-29 10:30:01 - 2026-10-01 23:00:01 | T=520.521 days | $\Delta f=1/T=0.001921$ cycles/day

$C(t) = c + \text{Re} \{ Z_f e^{2\pi i f t} \}$, $Z_f = a - ib$, $A(f) = |Z_f|$; independent GLS fit at each frequency; original timestamps, equal weights, existing masks.

Air: 1 m horizontal offset; source $\mu\text{mol/mol}$. Excel Z=0.25 m vs Oracle BOXZ=0.05 m unresolved. No unit conversion or time-zone correction.

Gaps and review flags retained. 520 occupied common days $\neq$ continuous validated data. Only 1.43 annual cycles; annual periodicity is not established.
